

Fight Coronaviruses with Simix Clean and Sanitize All Surfaces In One Step

Before Simix: Hygiena Luminometer ATP reading on stainless steel countertop recently cleaned with a competitor's product is 268. That means the countertop is completely contaminated.

Cleaning with Simix: Countertop was sprayed and wiped clean with Simix Multi-Surface Kitchen Degreaser.

After Simix: ATP reading after cleaning with Simix is 5. The CDC accepts ATP readings as an objective measurement of the cleanliness of surfaces. Anything less than 10 is considered sterile in operating rooms, ICU, and sterile services.

- High pH destroys viruses and germs
- Long-lasting layer of antimicrobial protection
- Keeps surfaces virus-free longer with less work
- Water-based - Zero VOC - Hypoallergenic
- No toxic fumes
- Safe for People and Pets
- Simix contains sodium percarbonate (hydrogen peroxide)

Simix Multi-Surface Kitchen Degreaser and Simix Multi-Surface Ceramic Coating Destroys Viruses on Hard Surfaces:

Desks • Tables • Hospital Equipment • Stainless Steel • Plastic • Countertops
Door Handles • Freezer, Dairy, Bakery, Deli Cases • Point of Sale • Booths & Chairs

Eco-Friendly Antimicrobial Coatings and Cleaners That Save You Time and Money

Eco-Friendly Antimicrobial Coatings and Cleaners That Save You Time and Money

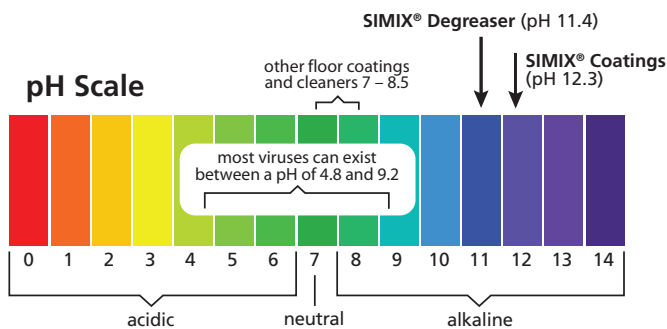

Easy 3 Step Process

1 Step 1: Clean Surfaces
 Dissolve 1/2 of a small scoop of **Simix Multi-Surface Kitchen Degreaser** in hot water in 32 oz. spray bottle. (For larger mixture, dissolve 2 small scoops in 1 gallon of hot water.)
 Spray surface.
 Wipe clean.

2 Step 2: Coat Surfaces for Added Protection
 Mix **Simix Multi-Surface Ceramic Coating** with water in spray bottle. Use 4 parts water to 1 part coating.
 Spray coating on to clean microfiber cloth.
 Rub on surfaces.
 Immediately dry buff with dry microfiber cloth.
 Do a second coat when first coat is dry.

3 Step 3: Clean Daily
 Spray **Simix Multi-Surface Kitchen Degreaser** mixture on surface.
 Wipe clean.

We recommend re-coating high-touch surfaces once a month. Recoat other surfaces annually.

Why does Simix have a high pH? Viruses live and grow on surfaces that have a pH level between 4.8 and 9.2. While most cleaning and coating products are pH neutral, Simix Degreaser (pH 11.4) and Coatings (pH 12.3) create a permanent, safe, high pH that prevents the growth of viruses and biofilm.

With Simix, you can easily maintain a clean environment that does not support virus growth.

What is SPOT-ON?

Sustainable Photocatalytic Oxidation Technology (SPOT) is what we call the titanium dioxide inside Simix Coatings and Degreaser. Titanium dioxide is a safe, naturally occurring compound that reflects natural and artificial light. As that light is reflected, it converts water in the air into hydrogen peroxide, which breaks down bacteria, viruses, germs, mold, grime and stains.

Worldwide Leader in User-Friendly Ceramic Coatings Since 2004
